FGTE MASTERLOCK REVERSE MECH 5003674

Legend

Connection gear teeth

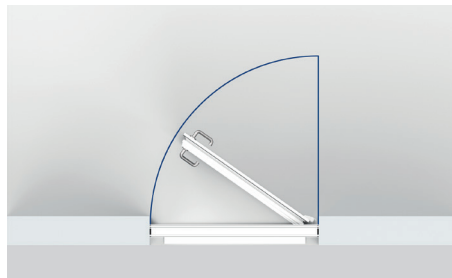

The locking system can be extended with various add-on parts (e.g. connecting rails, extension rods, corner drives) via the connection gear teeth.

DIN Direction

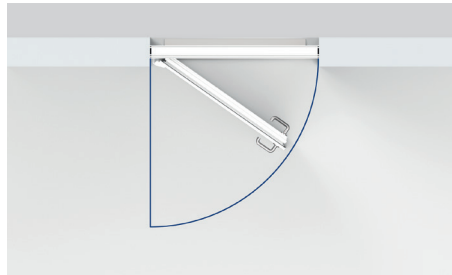

The DIN direction corresponds to the direction of rotation of the door sash. With the specifications DIN right or DIN left, the viewer is always standing on the side of the door on which the door hinges are applied and/or visible.

DIN left hand + right-hand

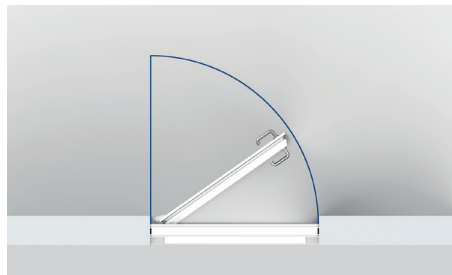

DIN left-hand inward opening

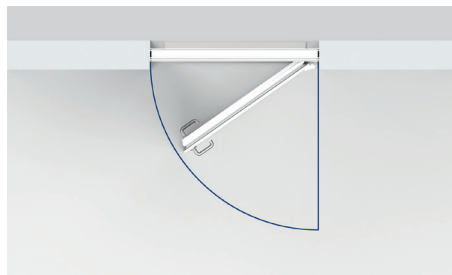

DIN left-hand outward opening

DIN right-hand inward opening

DIN right-hand outward opening

FGTE MASTERLOCK REVERSE MECH

5003674

Faceplate width	Indicates the horizontal distance from the left faceplate edge to the right faceplate edge.
Minimum order quantity	Indicates the minimum quantity of the product to be ordered with each order. This value can be exceeded (including single-digit values) without any problems.
Surface	Describes the surface and coating of the faceplate.
Type of faceplate	Designates the profile of the metal surface of the lock visible in the vertical rebate of the door sash.
