

Fittings to Aid Disabled Persons

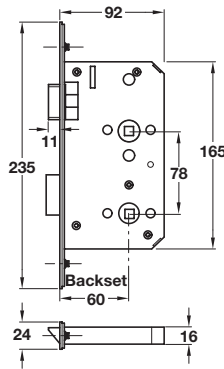

Lever Handle Sets

This set is designed for use on single swing doors. With the door in the unlocked position, both the lever handles will be in the horizontal position with the indicator showing green.

To enter depress lever, in the normal way.

When locking, the inside lever handle is moved to the vertical, throwing the deadbolt and changing the indicator to red.

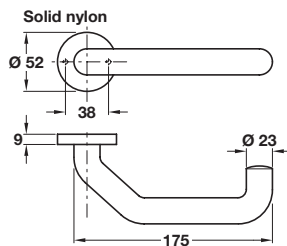

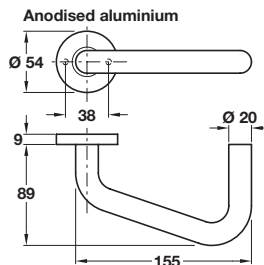

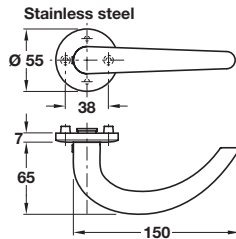

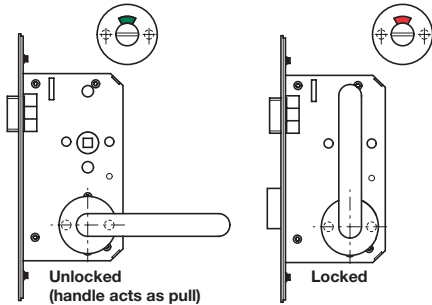

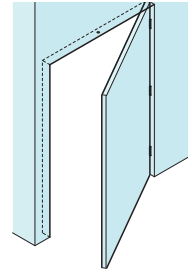

To exit, the lever handle is moved back to the horizontal, which retracts the deadbolt and a further depression then releases the latch bolt.

Clockwise closing =

Anti-clockwise closing =
